

RACKBLOCKS®

MODULAR CONSOLE SYSTEM

"Everybody likes to play with blocks"

DESIGNS©SJJG2009

For 30 years, Eastboard Consoles has designed and built award-winning control room furniture for broadcast networks, stations and production facilities throughout the world. From this experience, Eastboard's founder, Steve Goldberg, designed the RACKBLOCKS® Modular Console System, an innovative approach to building, modifying and maintaining control room furniture.

RACKBLOCKS® system frames form the strong central core onto which equipment housings, slatwall mounts, flat fillers and cabinetry elements such as storage units, can be added. Built from high-strength aluminum extrusions with T-slot mounting tracks, the frames provide nearly unlimited mounting locations for monitor arms, speakers, lights and other accessories. A worksurface edge brush grommet and an internal wire trough simplify cable management. Steel worksurface support brackets attach to the frames, and anti-tip end panels provide additional support. Vented, sliding-door panels fit into the lower frames for easy access. Simple setup with minimal assembly means you're ready for integration quickly!

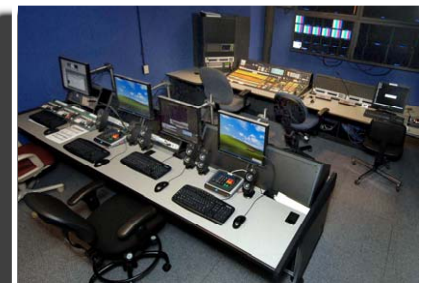

Frames can be modified, cabinetry elements can easily be changed, and worksurfaces can be replaced when needed. Consoles can be joined by corner wedges to form groupings, and can be shipped fitted with optional power distribution, grounding bars or lacing strips. Standard laminate finishes, black accents & exposed aluminum frames express a contemporary industrial style (*custom materials and finishes are also available*).

RACKBLOCKS® system consoles will enhance your facility, today and in the future.

INTRODUCING RACKBLOCKS-G®

Our newest product, RACKBLOCKS-G®, is designed with LEED criteria & recycling in mind. We're FSC certified, and RACKBLOCKS-G® consoles are manufactured from aluminum and steel, certified wood products, Greenguard laminates, ABS doors and trim, with low-VOC adhesives and finishes used throughout. RACKBLOCKS-G® consoles can contribute to LEED points and make your control room environment more healthy, while creating a more sustainable future.
