

*Eastboard is outfitting KAET's new digital HD facility at Arizona State University with consoles based on our RACKBLOCKS® Modular Console System, which allows KAET to easily reconfigure the console layouts as broadcasting needs and functions change over time.*

*The new broadcast center will soon be providing high-definition PBS programming throughout the region. Pictured above is Master Control, with a highly-customized monitor wall designed to fit two 67" DLP rear-projection monitors as well as the many LCD screens. This control room is a showpiece of the facility. Surrounded by glass walls, this is the first thing visitors see after stepping off the elevator. The project also includes a two-tier Production Control room (at left) with a separate Audio control room, two Post suites, and a Voiceover console. The station will be operational in the fall of 2009.*
