

# Eastboard Consoles

DIV A/S Custom Furniture

AARP Production Center

Washington DC

This new digital facility for AARP was built using high-end materials and finishes, from Corian worksurfaces to metallic laminates. The low-profile console design results in sleek and open control rooms, while providing excellent ergonomics. Our exclusive track-mounted monitor arm support system provides unlimited flexibility to suit operators' preferences. The "flying saucer" interview desk for the radio studio features a dual concentric pedestal design which isolates the microphones from vibration and noise on the worksurface, and the hexagonal shape allows for many combinations of host and guests. The project also includes a full audio control room, a custom graphics suite, and four of our EDITOP workstations.
